Art Unit: 2862

Claims 1-25 canceled.

26. (currently amended) A multi-spectral product for simulating or marking of an object, said product is configured as a sandwiched structure comprising at least a first layer that is discontinuous, covered by a pattern covering at least a portion of the first layer and rendering the object visually detectable and a second layer overlapping superimposed with at least a portion of the first layer, said second layer having a thermal coating that renders rendering the object visually detectable by virtue of a thermal contrast produced without employing an auxiliary source of energy.

27. (previously presented) The multi-spectral product as defined in claim 26, further comprising a third layer, capable of carrying said sandwiched structure.

28. (previously presented) The multi-spectral product as defined in claim 26, in which said first layer is at least partially thermally transparent.

29. Canceled.

30. (currently amended) The multi-spectral product as defined in claim 29 ~~26~~, in which said first layer is provided with multiplicity of meshes.

31. (previously presented) The multi-spectral product as defined in claim 28, in which said first layer comprises a fabric.

32. (previously presented) The multi-spectral product as defined in claim 31, in which said fabric is provided with meshes configured as substantially elliptical holes.

33. (previously presented) The multi-spectral product as defined in claim 31, in which said fabric is made of a polymeric material.

34. (currently amended) The multi-spectral product, as defined in claim 26, in which said second layer wherein the thermal coating comprises a low emissivity thermal coating.

35. (currently amended) The multi-spectral product as defined in claim 34, in which said coating is capable of producing infrared radiation with intensity, which is lower, than the intensity of the infrared radiation irradiated by these discontinuous portions of the first layer, ~~which are not in the overlapping relationship with the second layer.~~

36. (previously presented) The multi-spectral product, as defined in claim 34, in which said thermal coating is defined by a thermal reflection of about 0.7 in the infrared region and emissivity of about 0.3.

37. (previously presented) The multi-spectral product, as defined in claim 26, in which said layers are attached to each other in side-by-side relationship.

38. (previously presented) The multi-spectral product as defined in claim 26, which is provided with fastening means suitable for securing thereof on a support structure.

39. (previously presented) The multi-spectral product as defined in claim 26, in which said second layer comprises discrete regions representing a thermal signature of the corresponding regions of the object.

40. (previously presented) The multi-spectral product as defined in claim 27, in which said third layer comprises a net.

41. (previously presented) The multi-spectral product as defined in claim 40, in which said net is made of a polymeric material.

42. (previously presented) The multi-spectral product as defined in claim 26, in which said object comprises a military asset.

43. (previously presented) The multi-spectral product as defined in claim 26, in which said object comprises a civilian asset.
